Be prepared to travel around the world in two evenings! The Virginia Tech Carilion School of Medicine's spring Mini Medical School will explore issues relating to global health and international medicine.

On April 5, Dr. Thomas Kerkering, professor of medicine and chief of infectious diseases, will present an overview titled, "What is Global Health?" He will be followed by a series of short presentations by local organizations engaged in international medical outreach and education.

April 12 will feature a presentation by Dr. Cynda Johnson, dean of the school, and Dr. Dave Trinkle, associate dean for community and culture, on the school's international rotation program. Fourth-year students who recently participated in clinical medicine electives in Brazil, France, and India will also present on their experiences. A reception will follow.

A limited number of need-based scholarships are available. **Contact Carrie Knopf at cfknopf@carilionclinic.org with questions.**
